$$\frac{\forall x_a \exists y_{f(a)} Q(x_a, y_{f(a)}) \mid A \qquad \forall x_a (S(x_a)) \mid \neg A}{\forall x_a (S(x_a)) \land \forall x_a \exists y_{f(a)} Q(x_a, y_{f(a)}) \mid \Box}$$

no first order operation in this last inference ⇒ nothing to prove

502 – example with multiple, independent a's

derivation:

$$\frac{P(f(x),x) \vee Q(z) \vee R(z) \qquad \stackrel{\Pi}{\neg R(a)}}{R(a) \mid P(f(x),x) \vee Q(a) \qquad \qquad \stackrel{\Pi}{\neg Q(u)}} \qquad \stackrel{\Pi}{\neg P(z,a)} \\
\underline{Q(a) \vee R(a) \mid P(f(x),x) \qquad \qquad \neg P(z,a)} \\
P(f(a),a) \vee Q(a) \vee R(a) \mid \square$$

invariant: $\ell_{\Delta}[LI(C)] \mid \ell_{\Delta}[C]$

$$\frac{P(f(x),x) \vee Q(z) \vee R(z) \qquad \neg R(x_a)}{R(x_a) \mid P(f(x),x) \vee Q(x_a) \qquad \neg Q(u)} \qquad \prod_{\substack{\Pi \\ \neg Q(u) \\ }} \frac{R(x_a) \mid P(f(x),x) \vee Q(x_a) \qquad \neg Q(u)}{\forall x_a (Q(x_a) \vee R(x_a)) \mid P(f(x),x) \qquad \neg P(z,x_a)} \\ \forall x_a \exists y_{f(a)} \Big(P(y_{f(a)},x_a) \vee \forall x_a (Q(x_a) \vee R(x_a)) \Big) \mid \Box$$

Detailed derivation:

$$\Gamma \vDash \forall x_a(Q(x_a) \lor R(x_a)) \mid P(f(x), x)$$

$$\Gamma \vDash P(z, x_a)$$

hence

$$\Gamma \vDash \forall x_a \Big(\forall x_a (Q(x_a) \lor R(x_a)) \mid P(f(x_a), x_a) \Big)$$

$$\Gamma \vDash \forall x_a P(f(x_a), x_a)$$

$$\Gamma \vDash \forall x_a \Big(\forall x_a (Q(x_a) \lor R(x_a)) \mid P(f(x_a), x_a) \Big) \land \forall x_a P(f(x_a), x_a)$$

hence
$$\Gamma \vDash \forall x_a \Big(\forall x_a (Q(x_a) \lor R(x_a)) \mid P(f(x_a), x_a) \land P(f(x_a), x_a) \Big)$$

simplified

$$\Gamma \vDash \forall x_a \Big(\forall x_a (Q(x_a) \lor R(x_a)) \land P(f(x_a), x_a) \Big)$$

lifting: $LI(C) \mid C$

$$\frac{P(f(x),x) \vee Q(z) \vee R(z) \qquad \overset{\Pi}{\neg R(a)}}{\underbrace{R(a) \mid P(f(x),x) \vee Q(a) \qquad \qquad \overset{\Pi}{\neg Q(u)}}} \\ \frac{R(a) \mid P(f(x),x) \vee Q(a) \qquad \qquad \overset{\Pi}{\neg Q(u)}}{\underbrace{V(a) \vee R(a) \mid P(f(x),x) \qquad \qquad \overset{\Pi}{\neg P(z,a)}}} \\ \underbrace{\frac{\forall x_a (Q(x_a) \vee R(x_a)) \mid P(f(x),x) \qquad \qquad \neg P(z,a)}{P(f(a),a) \vee \forall x_a (Q(x_a) \vee R(x_a)) \mid \Box}} \\ \forall x_a \exists y_{f(a)} \Big(P(y_{f(a)},x_a) \vee \forall x_a (Q(x_a) \vee R(x_a)) \Big) \mid \Box$$
